DIRECTIONS FOR USE

Use only as directed.

Compatibility:

Fenbutin is compatible with most commonly used pesticides but should not be used together with alkaline materials, lime sulphur, sulphur or Bordeaux mixtures. Since the formulation of other products may change and water quality may vary from farm to farm, a physical compatibility test should always be carried out prior to application.

Mixing instructions:

Shake the Fenbutin container thoroughly before use. Mix the required quantity of Fenbutin with a small volume of water. Half fill the spray tank with clean water and whilst agitating, pour the mixture into the spray tank and then top up the tank to the required volume. Ensure thorough agitation during filling and spraying.

Application:

Fenbutin can be applied with conventional high volume spray equipment. All applications must be made with suitable equipment that is in good working order and correctly calibrated to give the desired coverage. Spray thoroughly to wet all parts of the tree. Commence spraying as soon as an increase in the number of mites is noticed. Repeat as necessary.

- Moenie spuitmis inasem nie.
- Dra beskermende klere wat handskoene en 'n gesigskerm insluit wanneer die konsentraat hanteer word.
- Was met seep en water na gebruik.
- Vermy kontak met oë, vel en klere.
- In die geval van oë of velkontak, was vel deeglik met seep en water en spoel oë onmiddelik met lopende water uit. Trek besoedelde klere uit en was voordat dit hergebruik word.
- Moet nie eet, drink, of rook tydens menging of aanwending of alvorens hande en gesig gewas is nie.
- Verhoed wegdrywing van spuitstof na ander gewasse, riviere, weiding, damme en areas nie onder behandeling nie.
- Maak toedieningsapparaat skoon na gebruik en raak ontslae van waswater waar dit nie gewasse, weiding, riviere en damme sal besoedel nie.
- Vermy besoedeling van voedsel, voer, drinkwater en eetgerei.
- Spoel die leë houer driekeer uit met 'n volume water gelykstaande aan ten minste 'n tiende van die inhoud van die houer. Gooi die spoelwater by die inhoud van die spuittenk voordat die houer vernietig word.
- Moenie leë houer vir enige ander doel gebruik nie.

GEBRUIKSAANWYSINGS
Gebruik slegs soos aangedui.

Verenigbaarheid:
Fenbutin is verenigbaar met die meeste plaagbeheermiddels maar moet nie saam met alkaliese middels, kalkswael, swael of Bordeaux mengsels toegedien word nie. Aangesien die formulering van ander produkte kan verander en die kwaliteit van die water ook van plaas tot plaas kan varieer, moet 'n fisiese verenigbaarheidstoets altyd uitgevoer word voordat gespuit word.

Menginstruksies:
Skud Fenbutin houer goed voor gebruik. Meng die aanbevole hoeveelheid Fenbutin met 'n bietjie water. Maak die tenk halfvol met skoon water en voeg die mengsel by terwyl aanhoudend geroer word. Vul die tenk tot die vereiste volume. Roer goed gedurende volmaak en terwyl gespuit word.

Toediening:
Fenbutin kan met ‘n konvensionele hoë volume spuitapparaat toegedien word. Alle toedienings moet gemaak word met geskikte toerusting wat in goeie werkende toestand en korrek gekalibreer is, ten einde die verlangde bedekking te verkry.

Bespuit deeglik om die hele boom te benat. Begin bespuiting sodra die aantal myte begin toeneem. Herhaal indien nodig.
